EDUCATION

B.Tech in Civil Engineering
Jayaprakash Narayan College of Eng.
2024 – 2027 **Pursuing**

Diploma in Civil Engineering
State Board of Tech. Education (SBTET)
2021 – 2024 **7.71 CGPA (1st Class)**

CERTIFICATIONS

Bentley Institute — STAAD.Pro
Dynamic Seismic & Wind Analysis — **Certified**

Autodesk Revit Architecture + V-Ray & Enscape
PTS CAD EXPERT (BIM Modeling) — **Certified**

Bentley RCDC — Concrete Design & Detailing
Automated BBS & Member Detailing — **Proficient**

Civil Engineering Industrial Training
Landmark Constructions (6 Mos) — May 2024

TECHNICAL SKILLS

STRUCTURAL SOFTWARE & BIM

Bentley STAAD.Pro | Bentley RCDC | Autodesk Revit | AutoCAD (2D/3D) | Enscape 3D | V-Ray Render

CODES & DESIGN STANDARDS

IS 456:2000 (RCC) | IS 1893 (Seismic) | IS 875 (Loads) | SP 34 (Detailing) | SP 16 & SP 34 | Limit State Method

ENGINEERING EXECUTION

Bar Bending (BBS) | Structural GA Plans | Site Rebar Detailing | Quantity Surveying

FOCUS AREAS

RCC Framed Structures | Seismic Dynamic Analysis | BIM 3D Detailing | Bentley RCDC Automation | Site Quality Assurance

COMMUNICATION

English (Fluent) Hindi Telugu Urdu

PROFILE SUMMARY

Civil Engineering student focused on structural design, computer-aided drafting, and hands-on site execution. Comfortable working through manual frame analysis and load distributions, as well as computational modeling using **Bentley STAAD.Pro**, **Bentley RCDC**, and **Autodesk Revit**. Experienced working with Indian Standard Codes (IS 456, IS 1893, IS 875, SP 34) through academic projects and 6 months of active on-site training at Landmark Constructions. Looking to contribute clean drafting, accurate structural modeling, and practical site understanding to an engineering team.

SITE EXPERIENCE

Civil Engineering Industrial Trainee • Landmark Constructions & Developers

Dec 2023 – May 2024 (6 Mos)

- Inspected **on-site rebar placement** before concrete pours, verifying bar diameters, spacing, clear cover, and beam-column junction ties against approved structural drawings.
- Assisted site engineers during concrete pours, checking slump test values, casting test cubes, and tracking formwork striking schedules.
- Prepared practical **Bar Bending Schedules (BBS)** and assisted in material quantity takeoffs for ongoing residential construction.

KEY ENGINEERING PROJECTS

RCC Framed Residential Building: Design & Detailing (Framed Structural Modeling)

Jan 2026 – May 2026

- Planned the structural framing layout and calculated dead and live load paths as per IS 875 Parts 1 & 2.
- Designed isolated footings, **230×300mm columns**, **230×300mm continuous beams**, and two-way slabs using Limit State Method (LSM) per IS 456:2000.
- Drafted complete structural general arrangement (GA) drawings and reinforcement schedules in AutoCAD, optimizing bar cut lengths to cut rebar waste by ~12%.

Seismic Analysis & Reinforcement Detailing in RCC Frames (Dynamic Structural Study)

Jan 2025 – May 2025

- Studied frame behavior, lateral drift, and stress distribution in multi-story RCC frames under earthquake ground motions (IS 1893:2016).
- Applied **IS 456:2000 & SP 34 detailing standards** for transverse links and rebar layouts across structural members to ensure safety, constructability, and prevent brittle shear failure.

3D Frame Modeling & Automated Detailing (STAAD.Pro & Bentley RCDC)

Academic Capstone

- Built 3D building models in **Bentley STAAD.Pro**, defined member properties, boundary supports, and primary load combinations.
- Exported analysis results into **Bentley RCDC** to automatically generate section designs, shear stirrup schedules, and detailed Bar Bending Schedules (BBS).

CAD & BIM WORKFLOW

Drawing & Model Coordination — BIM & CAD Integration

- Connected **AutoCAD 2D drafting** with **Revit 3D architectural models** and **STAAD/RCDC analysis outputs** to prepare clear, coordinated structural sheets for site use.
